

STEEL CONTAINERS

Part of a Balanced Breakfast

Virtually all steel drums and pails are reused, recycled or reconditioned. Some even go on to become everyday household items – like the toaster on your kitchen counter.

Conserving resources and lower lifecycle costs are just a few of the many strengths of steel. See more at www.steelcontainers.com.

STEEL CONTAINERS

SAFETY THROUGH STRENGTH

Steel containers are the strongest packages available for your products. Their strength keeps your materials, your people and your bottom line safe in an uncertain world.

See more of the strengths of steel at www.steelcontainers.com.

STEEL CONTAINERS

LIKE A VAULT FOR YOUR VALUABLES

No shipping container is more secure than one made from steel. Materials stored in steel drums and pails stay there. *Secure as diamonds in a vault.*

Even in a high-temperature fire, steel drums and pails won't burn. To see a fire test video that demonstrates the security of steel containers – and for more information about the benefits of steel shipping drums and pails – visit www.steelcontainers.com.
